The establishment of an inventory of fauna and flora of the Khonin Nuga region was promoted by the GIZ, the Deutsche Gesellschaft für Internationale Zusammenarbeit (GmbH), with the programme of “Climate Change and Biodiversity” in Mongolia, Ulanbator, and the former programme “Conservation and Sustainable Management of Natural Resources”. The Khan Khentey Protected Area Administration allowed us to work and to settle in the Khentey region. The infrastructure of the ecological research station was supported by the president of the Georg-August-Universität Göttingen.

Many scientists, experts, and students from Mongolia (National University in Ulanbator), Germany and other countries have contributed to the inventories of different taxa at Khonin Nuga. Their names are listed below. The book would not have been realised without that fruitful collaboration.
